

Links to Supplemental Material

1. The three reports associated with new rates: <http://www.seattle.gov/light/rates/rptspubs.asp>. While these supported the 2017-2018 rates, the methodology has not changed for the proposed 2019-2020 rates, so anyone interested in the background of how City Light normally calculates and designs the rates it proposes can get a good foundation with them.
2. A simple (2 customer class) example of how City Light allocates the overall customer revenue requirement to individual customer classes using marginal cost shares. This was a Review Panel presentation dated May 21, 2012 (“How City Light Uses Marginal Costs to Allocate Revenue Requirement”). Scroll down to that date and presentation title on the Review Panel website, under Meetings, Materials: <http://www.seattle.gov/citylightreviewpanel/meetings/materials>.
3. Article: Oregon public power utility eyes flat energy rate
