# Possible Safety Improvements at Arterial Intersections

**Crossing beacons** catch drivers' attention with a pair of yellow LED lights mounted on a pole underneath a pedestrian crossing sign. The LED lights flash when activated by a push-button.

**Curb ramps** facilitate wheelchair, bicycle, and pedestrian street crossings.

**Crosswalks** help vehicles and pedestrians avoid conflict and are a key building block of a walkable network.

**Curb extensions** shorten the crossing distance for pedestrians and help make them more visible.
